

Minister for Innovation, Science and the Digital Economy-Minister for Small Business

Ref: 01367-2016 - 17837/16

2 8 JUL 2016

The Honourable Dr Steven Miles MP Minister for Environment and Heritage Protection and Minister for National Parks and the Great Barrier Reef GPO Box 2454 BRISBANE QLD 4001

Dear Minister Steven

Please find enclosed a copy of the 2014–15 Statewide Landcover and Trees Study (SLATS) report and the Executive Summary brochure.

SLATS is a long-term vegetation monitoring initiative, and supports the Department of Natural Resources and Mines' administration of the *Vegetation Management Act 1999*. The SLATS report presents a comprehensive analysis of woody vegetation clearing trends in Queensland. The 2014–15 SLATS report states that the statewide woody vegetation clearing rate was approximately 296,000 hectares/year. This is similar to the 2013–14 statewide woody vegetation clearing rate of approximately 295,000 hectares/year.

I have provided copies to the Honourable Jackie Trad MP, Deputy Premier, Minister for Infrastructure, Local Government and Planning and Minister for Trade and Investment, the Honourable Dr Anthony Lynham MP, Minister for State Development and Minister for Natural Resources and Mines, and the Honourable Leanne Donaldson MP, Minister for Agriculture and Fisheries,

Please note the full report and its executive summary are embargoed until the official release.

If you require any further information, please contact Ms Christina Jones, Acting Science Leader, Remote Sensing Centre, Science Division, Department of Science, Information Technology and Innovation by email at christina.jones@dsiti.qld.gov.au or on telephone 07 3170 5450.

Yours sincerely

Leeanne Ehoch MP Minister for Innovation, Science and the Digital Economy and Minister for Small Business

Land cover change in Queensland in 2014-15 2014-2015 Statewide Landcover and Trees Study Report

Executive Summary

BACKGROUND

The Statewide Landcover and Trees Study (SLATS) is a vegetation monitoring initiative of the Queensland Government undertaken by the Department of Science, Information Technology and Innovation (DSITI).

The maps and statistics derived from SLATS support the Vegetation Management Act 1999 (VMA) administered by the Department of Natural Resources and Mines (DNRM)

The study detects changes in woody vegetation using Landsat satellite imagery Images captured approximately one year apart are compared using a combination of automated and manual mapping techniques to produce a statewide map of land cover change

Woody vegetation encompasses both woody remnant and woody regrowth vegetation as defined by the VMA Some examples of woody vegetation include undisturbed and disturbed native woodlands, timber plantations and exotic species.

To facilitate comparison between analysed periods, results are reported as woody vegetation clearing rates in thousands of hectares per year (,000 ha/year) for all of Queensland.*

A new method for calculating the rate of clearing has been applied for the 2014–15 period, and to all previously reported SLATS clearing periods (as shown in Figure 1). Refer to the full 2014–15 SLATS report for further information.

KEY FINDINGS

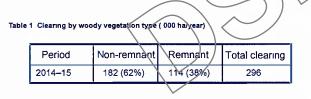

2014-15 period

 296 000 ha/year of woody vegetation was cleared statewide This was similar to the statewide woody vegetation clearing figure in 2013–14 of 295 000 ha/year.

 114 000 ha/year of remnant woody vegetation was cleared, statewide, representing 38% of the total woody vegetation clearing (Table 1). This compared to 100 000 ha/year of remnant woody vegetation clearing in 2013–14 (35% of total woody vegetation clearing).

 91% of cleared woody vegetation was replaced by pasture in the 2014–15 period. The remaining 9% was replaced by crop forestry, mining, infrastructure and settlements.

 29% of the 2014–15 mapped woody vegetation clearing had previously been cleared one or more times since 1988.

Rates are rounded to the nearest 1000 ha/year and percentages are rounded to the nearest whole percentage.

WOODY VEGETATION CLEARING

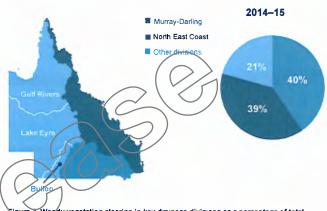

Mitchell

Grass

The Brigalow Belt and Mulga Lands continued to record the highest woody vegetation clearing rates in 2014–15. 130 000 ha/year and 65 000 ha/year were cleared in those regions (Figure 2) In 2013–14 comparatively 132 000 ha/year of woody vegetation clearing occurred in the Brigalow Belt and 108 000 ha/year in the Mulga Lands In the 'other' category, woody vegetation clearing rates changed significantly in the Gulf Plains region (18 000 ha/year in 2014–15 compared to 4 000 ha/year in 2013–14) and in the Mitchell Grass Downs region (26 000 ha/year in 2014–15 compared to 14 000 ha/year in 2013–14).

DRAINAGE DIVISIONS

Rigure 3. Woody vegetation clearing in key drainage divisions as a percentage of total clearing in Queensland (Table 1)

The Murray-Darling and North East Coast divisions continued to record the highest woody vegetation clearing rates in 2014–15. 119 000 ha/year and 115 000 ha/year were cleared in those regions (Figure 3) In 2013–14 comparatively, 153 000 ha/year of woody vegetation clearing occurred in the Murray-Darling and 111 000 ha/year in the North East Coast divisions In the other' category, woody vegetation clearing rates changed significantly in the Gulf Rivers division (21 000 ha/year in 2014–15 compared to 7 000 ha/year in 2013–14) and in the Lake Eyre division (38 000 ha/year in 2014–15 compared to 20 000 ha/year in 2013–14)

GREAT BARRIER REEF (GBR) CATCHMENTS

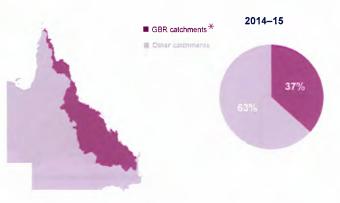

Figure 4. Woody vegetation clearing in the Great Barrier Reef catchments as a percentage of total clearing in Queensland (Table 1)

108 000 ha/year of woody vegetation was cleared in 2014–15 in the GBR catchments (Figure 4) This compared to 105 000 ha/year of woody vegetation clearing in 2013–14

* The GBR catchments are a subset of the North East Coast drainage division indicated in Figure 3.
